- 30 Your journey

The first laser eye surgery on a human eye was carried out in 1988 by Dr Marguerite McDonald, a current member of the Optical Express International Advisory Board.

Opening the eyes of the world to corrective eye surgery.

First there were glasses.
Then contact lenses.
Followed by a small miracle.
Laser eye surgery. And
correcting poor eyesight
has never looked back.

It's a wonderful world.
We'll help you see it that way.

So many people treated. So many lives improved.

Yes, it's true that more people choose us than any other provider. In fact, more than all the other providers put together. But what's more important is that we treat everyone as an individual. With personal care and attention to achieve the best possible results.

In the UK, only
Optical Express provides
complete eye care for all the
family. Everything from eye
tests to glasses and contact
lenses to corrective eye
surgery, cataract surgery
– and even treatment for
dry eyes.

Charlotte Supria,
Optometrist

It's a wonderful world.
We'll help you see it that way.

**Our advice at your
initial consultation
is free, expert,
comprehensive
and impartial.**

Free advice is great. Free, expert, comprehensive advice is even better. And hearing the truth is best of all. So for a 'no strings attached' recommendation, all you have to spend is a little time with us. Simply make an appointment for an initial consultation to see one of our highly qualified optometrists.

Andy Nash,
Patient

An eye test that tests more than your eye sight.

All eye tests aren't equal. Using the latest in clinical technology we'll carry out a number of tests, most of which you won't have experienced during a routine eye exam. These tests allow us to see the characteristics and imperfections of the surface of your eye as well as your prescription and health. Only by attending a consultation will you know if you're suitable for corrective eye surgery and which treatment plan is best.

Exclusive to Optical Express, you'll receive a personalised iScan report. It gives detailed information about your test results and recommendation – it even includes an x-ray and 3-D map of your eyes.

We can measure your
eyes over 1,200 times.

iDesign

You can choose the advanced technology of iDesign to further enhance your surgery. iDesign takes over 1,200 microscopic measurements in just seconds, delivering twenty-five times more accuracy than a standard prescription for glasses or contact lens. It creates a 3-D map of each eye that's as distinct as a fingerprint, making it possible for your surgeon to create a treatment plan that's precisely custom-fit just for you.

Ed Borgnis,
Laser eye surgery

If you're suitable for laser eye surgery you can say goodbye to glasses and contact lenses and see the world the way you want to see it.

Laser eye or lens surgery?

It's a wonderful world.
We'll help you see it that way.

If you're over 50, lens surgery may be best for you. But whether its laser or lens, the common goal is true vision transformation.

Sally Cross,
Lens surgery

We have the same state-of-the-art technology in every Optical Express clinic that led NASA to approve laser eye surgery for their astronauts.

Over £400 million
has been invested
in our clinics and
advanced technology.

This investment has resulted in clinics you'll feel comfortable in. Advanced technology that makes life changing treatments possible and takes just minutes to perform. Combined with our expert surgeons, you're in safe hands.

From a Wonderful Team

Our clinical team has performed over two million surgeries. But they never forget it's your first.

The more surgeries they perform the greater a surgeons experience and expertise. But we ask for more. Our surgeons will support you with an extra special compassion that will make your experience as positive as the results.

All of our surgeons are regularly assessed to make sure they are maintaining the highest possible standards.

It's a wonderful world.
We'll help you see it that way.

Troy Scott,
Optometrist

Aftercare starts the day of your treatment.

It's important to remember that corrective eye surgery is no different from any other kind of surgery. That's why we're just as committed to your immediate and longer-term aftercare. Before you leave the clinic we'll advise you on what you should – and shouldn't do – to make sure of a speedy recovery. You'll see us the next day for a review appointment to check on your progress. You'll have further post-op appointments as you need them too, just to make sure you're healing well and ready to start enjoying life to the full.

Anthony Hay,
Laser eye surgery

A Wonderful Promise

We receive a huge amount of positive feedback, but the most common comment from our patients is “I wish I’d done it sooner.”

The freedom of glasses-free vision.

Being at one with nature.
A sense of freedom with all of the
underwater sights, crystal clear.
The world is your oyster.

It's a wonderful world.
We'll help you see it that way.

Today, the majority of people who come to us can benefit from corrective eye surgery. But if you're not suitable for this type of treatment we'll always be honest with you. We'll explain what we consider to be your best option and make sure you leave your consultation feeling positive that you've received the best possible advice.

We've advised over
250,000 people not to have
corrective eye surgery.

With Wonderful Results

...but for the people we have treated the results have been life-changing.

The number of people who choose Optical Express is growing every week, every month, every year. That's because over 99% of those treated achieve 20:20 vision or better¹. And it's only natural that word of mouth travels fast. These personal recommendations lead to greater confidence and trust in our standards of service and expertise.

¹In a study of 177,555 Optical Express patients with the most common prescriptions we treat, 99.1% achieved 20:20 vision or better following treatment.

It's a wonderful world.
We'll help you see it that way.

Lens surgery
Stuart Hunt,
Laser eye surgery

And Wonderful Outcomes

“Being able to play netball without my glasses getting in the way has definitely improved my performance.”

Lauren Vasey,
Laser eye surgery

It's a wonderful world.
We'll help you see it that way.

“Singing is very important to me. As my eyesight deteriorated it was so disheartening not being able to perform to the best of my ability. The biggest change for me is being able to read music and see the conductor in the choir.”

Jeanne Simpson,
Lens surgery

“Laser eye surgery really was the ideal solution for me. I can now stay out later and live my life without having to worry about contacts drying out. For me this is truly life-changing.”

Nabeel Khan,
Laser eye surgery

“Breaking my glasses was the push that I needed. Laser eye surgery had been on the radar for years. For anyone who hates wearing glasses or contacts then this is a wonderful alternative.”

Jack Maddix,
Laser eye surgery

Your consultation

To make sure corrective eye surgery is right for you we offer a free, no obligation consultation. And with the largest number of private clinics in the UK and Ireland, you'll be sure to find a clinic near you.

Meeting your optometrist

A specialist optometrist will discuss your reasons for considering surgery and, if you're suitable, recommend their best treatment for you. The final decision will rest with your eye surgeon.

Meeting your surgeon

You'll have a discussion with your surgeon at least two days before your surgery day. In a small number of cases they may recommend that a different treatment is best suited to you.

Your surgery

Your surgical care team will do everything possible to make you feel at ease. It's normal to feel a little anxious, but your team will make sure you're comfortable with all aspects of your surgery.

After your surgery

Before you leave the clinic we'll talk to you about caring for your eyes and what you can expect over the next few days and weeks. You're then free to rest and recuperate in the comfort of your own home.

Planning your aftercare

Your aftercare is as important as the surgery itself. We'll see you the day after your surgery to check on your recovery and tailor several more post-op appointments until you're discharged.

Our vision is to completely eliminate the need to put up with poor eyesight – and it's something that we truly believe is achievable.
